PROFILE

I’m an undergraduate software engineering student with a background in Digital T-Levels. Passionate about programming and eager to learn, I’m focused on growing my skills and building a professional IT portfolio that stands out.

SKILLS

Problem Solving

During university and my web development bootcamp, I would create projects either for passion or as assignments. These would test me in both programming and my ability to solve problems as they arise, be it with the code or in general. Such as parameter changes or deadline adjustments.

Collaboration skills

During my web development bootcamp, we were given teams to collaborate with during the final projects, this was to build our skills as teams and build projects that have greater prospects than we could do individually. This helped me to learn how to work as part of a team, how to solve issues as part of a team and how to handle planning as part of a team.

Coding and Programming languages

During my web development bootcamp and university, I learnt a plethora of coding languages and frameworks, some examples being HTML, CSS and JavaScript A few frameworks I’ve used include Tailwind CSS and React JS.
Alongside these, I did a small amount of SQL and PHP during my time at Oldham sixth form college. I also have experience using the MERN stack, with small amount of experience using Angular JS.

Education

Manchester Metropolitan University
Currently Studying
BSc(Hons) Software Engineering

Oldham Sixth Form College
2020 – 2022
Digital T-Level – Merit

North Chadderton school
2015 – 2020
GCSE

Experiences/Courses

Oldham council placement
Aug 2021 – Nov 2021
Unity IT Academy Trainee

Web Development Bootcamp (*The Developer Academy)*
Nov 2023 – March 2024
Skills bootcamp

Software developer role (*the developer academy)*
Sep 2024 – Dec 2024
Contract work

Greenbank Balti
Current occupation
Working at Greenbank Balti helping the background processes on weekends.

Plumbing/house building work
Ongoing
Often accompany my dad in his plumbing/construction jobs.

PROJECTS

NASA APOD Project (React JS, NASA Astronomy Picture of the Day API.)
To enhance my skills in React JS and API integration, I developed a website using NASA's Astronomy Picture of the Day API. The site dynamically displays a picture, title, and description, with functionality to support both images and videos in response to API updates. To optimize performance and manage the API's 1,000 requests per day limit, I implemented local storage, allowing the site to cache and retrieve the current day's content on reload.
